

Spaces, Pages and Blogs

Collaborate.green is organized into spaces, which each consist of pages.

What is a space?

Spaces are Confluence's way of organizing content into meaningful categories. You can think of it like having different folders into which you can put your work.

For example, program spaces (such as Program SRJS), or team spaces (for members of a specific team, such as SRJS Pantanal-Chaco).

What are pages and blog posts?

Pages and blog posts allow you to capture and share information in Confluence. You can think of it like the content you put in your folders. Every space consists of one or more pages, and underlying child pages.

[Pages](#) are useful when you want the information to last and evolve over time. Blog posts are an easy way to share announcements, journal entries, status reports, or any other timely information. Others can join in by [commenting on](#) and/or liking your blog post.
